(54) Title: TREATMENT OF VIRAL INFECTIONS

Reduction in HSV1 infectivity after treatment with various concentrations of GIN peptides

(57) Abstract: The present invention concerns polypeptides derived from a tandem repeat of apoE₁₄₁₋₁₄₉ and their uses as medicaments. The peptides may comprise the tandem repeat, and truncations thereof, for which at least one Leucine (L) is replaced by an amino acid with a side chain comprising at least 4 carbon atoms and at least one Nitrogen atom. Such peptides are useful for preventing or treating viral infections.

Declaration under Rule 4.17:

— *of inventorship (Rule 4.17(iv)) for US only*

Published:

— *without international search report and to be republished upon receipt of that report*
